

Breed Standard of the Afghan Hound

A Breed Standard is the guideline which describes the ideal characteristics, temperament and appearance of a breed and ensures that the breed is fit for function. Absolute soundness is essential. Breeders and judges should at all times be careful to avoid obvious conditions or exaggerations which would be detrimental in any way to the health, welfare or soundness of this breed. From time to time certain conditions or exaggerations may be considered to have the potential to affect dogs in some breeds adversely, and judges and breeders are requested to refer to the Kennel Club website for details of any such current issues. If a feature or quality is desirable it should only be present in the right measure.

General Appearance

Gives the impression of strength and dignity, combining speed and power. Head held proudly

Characteristics

Eastern or Oriental expression is typical of breed. The Afghan looks at and through one.

Temperament

Dignified and aloof, with a certain keen fierceness.

Head and Skull

Skull long, not too narrow, with prominent occiput. Foreface long with punishing jaws and slight stop. Skull well balanced and mounted by a long 'top-knot'. Nose preferably black, liver permissible in light-coloured dogs.

Eyes

Dark for preference, but golden colour not debarred. Nearly triangular in appearance, slanting slightly upwards from inner corner to outer corner.

Ears

Set low and well back, carried close to head. Covered with long silky hair.

Mouth

Jaws strong, with a perfect, regular and complete scissor bite, i.e. upper teeth closely overlapping lower teeth and set square to the jaws. Level bite tolerated.

Neck

Long, strong, with proud carriage of head.

Forequarters

Shoulders long and sloping, set well back, well muscled and strong without being loaded. Upper arm long and sloping. In profile this brings the elbow vertically below the wither. Forelegs straight and well boned, elbows close to ribcage, turning neither in nor out.

**Body**

Back level, moderate length, well muscled, back falling slightly away to stern. Loin straight, broad and rather short. Hipbones rather prominent and wide apart. A fair spring of ribs and good depth of chest.

Hindquarters

Powerful, well bent and well turned stifles. Great length between hip and hock, with comparatively short distance between hock and foot. Dewclaws may be removed.

Feet

Forefeet strong and very large both in length and breadth, and covered with long, thick hair; toes arched. Pasterns long and springy, pads well down on ground. Hindfeet long, but not quite as broad as forefeet; covered with long thick hair.

Tail

Not too short. Set on low with ring at end. Raised when in action. Sparsely feathered.

Gait/Movement

Smooth and springy with a style of high order.

Coat

Long and very fine texture on the ribs, fore and hindquarters and flanks. In mature dogs, from the shoulder backwards and along the saddle, hair short and close. Hair long from the forehead backwards, with a distinct silky 'topknot'. On the foreface hair short, ears and legs well coated. Pasterns can be bare. Coat must develop naturally. Any evidence of clipping or scissoring should be penalised.

Colour

All colours will be acceptable, however white markings on the head or collar are highly undesirable.

Size

Ideal height: dogs: 68-74 cms (27-29 ins); bitches: 63-69 cms (25-27 ins).

Faults

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog.

Note

Male animals should have two apparently normal testicles fully descended into the scrotum.
